STOP PRESS

We have stocks for delivery now so don't delay as it is highly likely that the current NZ\$ will not last. We guarantee you will be impressed with its sophistication and its value for money.

The **COTEC SUPA SHAKER** combines the latest in high speed paint mixing concepts and technology.

We have for you a rugged, reliable and efficient paint mixer that handles from 0.5 to 20 litres easily.

Its strong construction and robust engineering means you get performance when it counts and a value that's truly amazing.

The pail is automatically measured and clamped with the speed being calculated to match the size of the container.

There is a unique "easy load" facility, (where the bottom holder slides out giving direct access to load the pail). This saves stooping and back problems.

The front control panel allows for easy selection of drum size, speed and mix time. There are safety features including emergency stop, safety door interlocks and "unbalanced" stop.

For a strong, quiet, robust, effective mixer at a price that will amaze you, you can't go past the **COTEC SUPA SHAKER**.

STOP poorly mixed paintget the COTEC SUPA SHAKER to do it for you!!
